

MARIA ŁAŃCUCKA-ŚRODONIOWA

A CATALOGUE OF THE TYPES OF FOSSIL SPECIES
AND INTRASPECIFIC TAXA KEPT IN THE MUSEUM OF THE
DEPARTMENT OF PALAEOBOTANY, INSTITUTE OF BOTANY,
POLISH ACADEMY OF SCIENCES, KRAKÓW

Katalog typów kopalnych gatunków i taksonów wewnętrzgatunkowych znajdujących się w Muzeum Zakładu Paleobotaniki Instytutu Botaniki Polskiej Akademii Nauk w Krakowie

ABSTRACT. This catalogue comprises 66 types of species and intraspecific taxa, of which 60 have been described chiefly on the basis of fruits and seeds from Tertiary floras and 6 from Quaternary floras. I managed to indicate the holotypes of only 16 newly described species, fixing the lectotypes and isotypes for most of the remaining taxa.

INTRODUCTION

The collection of the Department of Palaeobotany, Institute of Botany, P. A. Scs. in Kraków contains several dozen types of fossil taxa described in 1928—1982 by the following workers of the Jagiellonian University and the Institute of Botany, P.A.Scs.: J. Zabłocki (1928), W. Szafer (1931, 1945, 1947, 1952a, 1952b, 1954a,b, 1958a, 1958b, 1961, 1963), B. Szafran (1949), J. Jentys-Szaferowa & J. Truchanowiczówna (1953), M. Reymanówna (1963, 1973), M. Łańcka-Środoniowa (1967, 1975, 1977, 1979), E. Zastawniak (1978) and D. Zdebska (1982).

The newly distinguished taxa come chiefly from Neogene floras (30 species and 2 forms from the Miocene and 25 species and 2 forms from the Pliocene). Eight species were described from floras of older age than Tertiary and 4 species, 1 variety and 1 form from Quaternary floras. These remains are inventoried and well protected, but many species lack holotypes (that is particularly true of fruits and seeds) indicated by the authors while making the diagnoses. The designation of lectotypes and isotypes was therefore an important and even necessary task. It was often very difficult to find specimens illustrated in particular papers, specially so in cases of abundant fossil material.

The present catalogue of types includes only taxa from Tertiary and Quaternary floras. The species described from floras older than Tertiary (seven from the Jurassic and one from the Devonian), whose holotypes have been indicated by the authoresses (Reymarówna 1983, 1973; Zdebska 1982), are here omitted. All the newly described taxa are recorded in the card index in the Department of Palaeobotany, Institute of Botany, P.A.Scs. in Kraków; it covers 74 taxa at the present time.

The catalogue is arranged in alphabetical order, with its division into Tertiary and Quaternary floras retained. The names of taxa are given according to the now binding nomenclature, whereas the names used by the authors are placed in brackets. The respective items of literature, the page on which the diagnosis or description is given and the data about illustrative documentation are provided for each taxon. Changes made in the determination of some taxa in accordance with the present-day state of palaeobotanical study are also given (they concern 11 genera and 4 species) and so are the remarks and opinions hitherto unpublished.

The designation „holotype” has been introduced (if not indicated by the author) only when the distinction of a species was based on one specimen. In the assemblage dealt with there are 14 holotypes (these should be 15 in number, but one was lost soon after its description), 50 lectotypes and one neotype. All the specimens are stored in the Museum of Department of Palaeobotany, Institute of Botany, P.A.Scs. in Kraków, but bear different collection denotations, because they belong to two different institutions: the Institute of Botany, P.A.Scs. (IB PAN) and the Institute of Botany, Jagiellonian University (IB UJ).

I wish to express my heartfelt thanks to my colleagues Dr. Tadeusz Tacik and Dr. habil. Ewa Zastawniak for their help with establishing correct designations as well as for valuable remarks and discussions during my work on this paper. My thanks also go to Dr. Janina Truchanowiczówna for choosing the lectotype of *Menyanthes carpatica* and the neotype of *M. trifoliata* L. var. *interglacialis*, and to Assist. Prof. Jerzy Staszkiewicz for choosing the lectotypes for the species of the genus *Trapa*.

TERTIARY

Acorellus distachyoformis Łafic.-Środ., Cyperaceae

Nowy Sącz I — Miocene, Domański Wierch — Pliocene

Łaficka-Środoniowa 1977, p. 40, Lectotype Pl. 5, fig. 3 and isotypes Pl. 5, figs. 1, 2, 4 (Nowy Sącz I: IB PAN 194/7). Paratypes Pl. 5, figs. 5, 7 (Domański Wierch: IB PAN 71/541).

QUATERNARY

Armeria iversenii Szafer, *Plumbaginaceae*

Łęki Dolne — Pleistocene

Klimaszewski & Szafer 1945, p. 17. Lectotype Pl. 1, fig. 2b (IB UJ Q-68/1). Isotypes Pl. 1, figs. 2a, c — specimens have not been found. The slide with pollen

grains (Szafer 1945, Pl. 1, figs. 4, 5) has not been found. In the assemblage there are many specimens that represent the species better than does the lectotype, but they have not been shown in illustrations. Diagnosis: Szafer 1945, p. 23.

***Larix polonica* Rac. f. *fossilis* Szafer, Pinaceae**

Hamernia — Interglacial

Szafer 1931, p. 23. Lectotype Pl. 1, fig. 1. Isotype Pl. 1, fig. 2. IB UJ Q-64/1. Remarks on the structure of cones of this species are given by Raciborski (1890, p. 492) and Szafer (1914, p. 130 and 1948, p. 10).

***Menyanthes trifoliata* L. var. *interglacialis* Jentys-Szafer. & Truchan., Menyanthaceae**

Kalisz — Eemian Interglacial

Jentys-Szaferowa & Truchanowiczówna 1953, p. 45. The neotype was chosen by J. Truchanowiczówna on Feb. 20, 1984. In the paper of 1953 the authoresses did not name the sites from which the specimens illustrated come and today these specimens cannot be found in the abundant fossil material. The neotype belonged to the materials dealt with by the authoresses when they were preparing the diagnoses. IB PAN Q-63/1.

***Trapa capitulata* Szafer, Trapaceae**

Ciechanki Krzesimowskie — Mazovian Interglacial

Szafer 1954b, p. 132. Lectotype Pl. 2, fig. 2. IB PAN Q-62/1.

***Trapa hryniwieckii* Szafer, Trapaceae**

Żydowszczyzna, USSR — Mazovian Interglacial

Szafer 1954b, p. 130. Lectotype Pl. 1, fig. 8. Isotype Pl. 1, fig. 9. IB UJ Q-61/2.

***Trapa mikii* Szafer, Trapaceae**

Żydowszczyzna, USSR — Mazovian Interglacial

Szafer 1954b, p. 131. Lectotype Pl. 2, figs. 8, 9. Isotype Pl. 2, fig. 10. IB UJ Q-61/1.
